TO WHOM IT MAY CONCERN

Dear Madam/Sir,

Re: Recommendation for Joseph Mutinda Munguti

Mr. Mutinda is a graduate in Technology and Management Studies at Moi University, Kenya. This background in technology and management led to SASOL hiring him as Project Coordinator.

For the last three years he has worked in SASOL organising communities to construct sand dams and use sustainable technologies in their use of this water for improved production and marketing. His coordination work in SASOL involves design and implementation of sustainable social technology and marketing systems to address the production resulting from the construction of sand dams. To date farmer driven innovations in agricultural production and marketing have led to a large supply of horticultural products.

We nominate him for the Kyoto conference, Third World Water Forum, for the experience of SASOL is has been recognised by our peers as a major contribution to participatory sustainable development.

It is our hope that you will assist him to get to this important conference and to return safely.

Sincerely yours,
SASOL Foundation

Prof. G. C. M. Mutiso
Chair
